

ABSTRACT OF THE DISCLOSURE

5

Method for manufacturing corrugated board or the like,
whereby different material strips (3-6) are fastened
together by means of a bonding agent, whereby one or
several material strips (3-6) are guided along at least one
10 press-on device (15-16), where they are guided over one or
several elements (10-14), in particular supporting
elements, and are pressed against them by means of a series
of movable press-on parts (19), characterized in that for
pressing on these press-on parts (19), use is made of
15 magnetic forces.
